```
cd /Users/rahade/SeleniumGrid
```

```
java -jar selenium-server-4.10.0.jar hub -> to start hub
```

```
java -jar selenium-server-4.10.0.jar node --detect-drivers true ->  
to start node and to detect drivers in the path
```

In Different Machine download the jar and browser and put it in a folder and to register node

```
java -jar selenium-server-4.10.0.jar node --detect-drivers true -  
publish-events tcp://192.168.86.250:4442 --subscribe-events tcp://  
192.168.86.4443 -> to create a node and register the node and it  
ping the port 4442 and 4443
```
